

AIS SCHOOL VISION

For our students to become confident, capable and socially aware global citizens who contribute meaningfully to the communities in which they choose to live and work.

Jakarta Bytes, 21st August 2026

Week 6 Highlights

Really big week yet being only the four school days! We started our week launching our **UNSW Foundation Course** on Tuesday. It was great to see some members of our community, board members, parents, colleagues and students as well attend. Also we had a keynote speaker, Mr Oki Earlivan Sampurno - Special Adviser to the Minister for Higher Education, Science and Technology for Industry and International Cooperation. As mentioned, this is a new and cutting edge programme of study that has multiple benefits for our current and future students. Very exciting times ahead for our High Schoolers.

We then moved focus to the **High School Activities Week** including our Taipans Cup. The Activities Week was our replacement for our Experiential Camps, with day excursions and CAS overnights completed, it was a chance for some different learning experiences.

The Taipans Cup, a High School legacy event for us, it was great to see the comradery, competitiveness in all that participated. Well done to Ms Jill and our CAS student organisers, particularly Zelda. Outstanding event. Great job!

Don't forget our Book Weeks starting up next week

Air Quality Update

AIS Jakarta has high quality air filters as part of our ventilation and air conditioning system which are cleaned and serviced every term. We also have two air quality sensors on the campus, one is at the main entrance (measuring the quality of the air outside) and the other above the doorway leading from the canteen to the internal stairs (measuring the quality of the air inside the campus). Our air quality sensors measure AQI using the same scale as the Air Quality Index website. One of the closest monitoring stations on the Air Quality Index website is at the US Consulate in Jakarta South ([click to access data from the Air Quality Index website](#)). As we are further from the centre of the city and most polluted parts of Jakarta, our readings are usually significantly lower than those reported by other stations in central and northern Jakarta.

If air quality was to reach a measurement of 200 or above (Very Unhealthy) we will cease all outdoor activities. It should also be noted that all students have indoor and outdoor play options at every recess and lunch break. Please see the table below for an overview of the Air Quality Levels that we are using as a point of reference.

AQI	Air Pollution Level	Health Implications	Cautionary Statement (for PM2.5)
0 - 50	Good	Air quality is considered satisfactory, and air pollution poses little or no risk	None
51 -100	Moderate	Air quality is acceptable; however, for some pollutants there may be a moderate health concern for a very small number of people who are unusually sensitive to air pollution.	Active children and adults, and people with respiratory disease, such as asthma, should limit prolonged outdoor exertion.
101-150	Unhealthy for Sensitive Groups	Members of sensitive groups may experience health effects. The general public is not likely to be affected.	Active children and adults, and people with respiratory disease, such as asthma, should limit prolonged outdoor exertion.
151-200	Unhealthy	Everyone may begin to experience health effects; members of sensitive groups may experience more serious health effects	Active children and adults, and people with respiratory disease, such as asthma, should avoid prolonged outdoor exertion; everyone else, especially children, should limit prolonged outdoor exertion
201-300	Very Unhealthy	Health warnings of emergency conditions. The entire population is more likely to be affected.	Active children and adults, and people with respiratory disease, such as asthma, should avoid all outdoor exertion; everyone else, especially children, should limit outdoor exertion.
300+	Hazardous	Health alert: everyone may experience more serious health effects	Everyone should avoid all outdoor exertion
